

Professional and Technical Skills

- Over 3 years of experience in designing, developing, and maintaining responsive, accessible, and high-quality web applications and frontend systems using React.js, Next.js, Redux, TypeScript, JavaScript (ES6+), HTML, CSS, Vite, Webpack, React Hooks, Context API.
- Proficient in UI/UX design principles, WCAG accessibility, component-based architecture, state management, and performance optimization for interactive, customer-facing products.
- Skilled in cross-functional collaboration with UX designers, product managers, and backend engineers to build intuitive, scalable, and reusable frontend components for large-scale, enterprise-grade platforms.
- Over 3 years of hands-on experience developing and integrating RESTful APIs, GraphQL services, and microservices using Java, Spring Boot, Node.js, and Golang.
- Proficient in object-oriented design, software architecture, API design, server-side rendering, data flow optimization, and containerization with Docker and Kubernetes.
- Familiar with DevOps practices, CI/CD pipelines, automated deployment, and monitoring production environments in AWS, Azure, and GCP cloud platforms.
- Strong understanding of relational and NoSQL databases, including MySQL, MongoDB, and Couchbase, with experience in indexing, query optimization, and data modeling for distributed systems.
- Skilled in SQL and analytical troubleshooting of data pipelines, ensuring reliability and scalability in high-traffic environments.
- Over 3 years of experience in implementing unit, integration, and end-to-end testing using JUnit, Jest, Cypress, and Mockito.
- Focused on developing maintainable, testable, and secure codebases and implementing observability, monitoring, and metrics tracking to improve system reliability.
- Proficient in maintaining code quality, conducting code reviews, and following agile software development methodologies to deliver robust and production-ready systems.
- Hands-on experience with CI/CD tools (Jenkins, GitHub Actions, Bitbucket Pipelines), container orchestration (Docker, Kubernetes), infrastructure management, and cloud deployment on AWS, Azure, and GCP.
- Skilled in automation, monitoring, and optimizing build systems and workflows to ensure reliable and efficient software delivery in fast-paced, production-scale environments.
- Strong foundation in software engineering principles, design patterns, and system design.
- Over 3 years of experience building scalable, reliable, and maintainable software products, analyzing architectural tradeoffs, and optimizing complex web systems.
- Skilled in object-oriented programming, algorithm design, data structures, and complexity analysis to drive performance and scalability.
- Proven experience collaborating with cross-functional teams and global partners, mentoring junior engineers, and leading knowledge transfer, code reviews, and agile sprints.
- Demonstrated ownership of features from design to deployment, with strong communication skills, problem-solving ability, and capacity to work independently amid ambiguity.
- Contributed to delivering high-quality features by sharing ideas that promote innovation and support continuous improvement within the engineering team.

Work Experience

Staples Inc., Framingham, MA
Software Engineer II

08/2025-Present

- Maintained and enhanced a variety of pages on the Staples' eCommerce website, by implementing features as per business requirements, with a focus on user experience and responsive web design.
- Collaborated with Search and Analytics teams to integrate features like analytics tagging on pages for data enablement, and optimized application performance by identifying and resolving data flow inefficiencies on the server side, leading to reduced latency and faster data retrieval.
- Improved search rankings and increased organic traffic for multiple Staples eCommerce pages by optimizing SEO through targeted code enhancements.
- Designed and deployed a multimodal (text + audio) chatbot using Azure OpenAI and vector search, delivering personalized product recommendations and improving user engagement across the Staples website.
- Onboarded and mentored new team members and interns by delivering knowledge transfer sessions, providing technical guidance, and actively participating in code reviews, enabling them to quickly ramp up and contribute effectively to team projects.

Staples Inc., Framingham, MA
Rotational Software Engineer

05/2023-07/2025

- Migrated APIs from Node.js to Java for Staples' search engine optimization (SEO) application in accordance with business requirements, and implemented comprehensive testing strategies, including unit, integration, and end-to-end testing.
- Enhanced the SEO validation application by expanding the test suite, improving test coverage and robustness in detecting SEO inconsistencies across Staples' webpages.
- Collaborated closely with database administrators to develop robust indexing strategies, and demonstrated strong debugging skills to reduce Couchbase queries' response times and improve data retrieval efficiency.
- Integrated Azure services, such as Azure Storage (uploading, downloading, and deleting files) into the SEO application, while developing and maintaining comprehensive documentation about the integrated features.
- Spearheaded the onboarding of a new product content syndication provider, successfully integrating their content into product detail pages to enhance user experience and drive engagement.
- Integrated a new AI chat vendor to replace the existing live chat across the Staples website, enhancing customer support efficiency and improving user interactions.
- Developed a reusable orders status tile, providing users with up-to-date order information and quick access to purchase history, improving usability and reducing navigation friction.

Staples Inc., Framingham, MA
Software Engineer Intern

02/2023-05/2023

- Developed an internal pointing poker application, resulting in improved efficiency in the scrum estimation process, eliminating the need for a third-party application, and leading to significant cost savings, enhanced security as well as data privacy for organization data.

Staples Inc., Framingham, MA

Software Engineer Intern

06/2022-08/2022

- Redesigned the store filter component for the Staples website by adding the functionality for users to select multiple stores within a desired radius, and developed REST APIs for the component using Java and Spring Framework, leading to an improved bounce rate.

Education

Master of Engineering in Computer Science (CGPA: 3.93/4.00), 2023, Virginia Tech, Blacksburg, VA

Bachelor of Engineering in Computer Engineering (CGPA: 8.69/10.00), 2021, University of Mumbai, Mumbai, India
